

# Frameless Application Offerings

## Premium Offering

1. Your shower enclosure is completely customized, one of a kind, to the exact size that you desire.
2. If your space allows for it, your frameless door can be up to 84" tall and 36" wide, and include Maximum Hinges, which support a door 30lbs+ heavier than a standard 28" door.
3. Your shower space is Laser Templated, with every 1/16" outage noted on the drawing, giving the glass fabricator exact specifications. All of these procedures make for a tighter glass fit.
4. With minimal glass clamps, a thin bead of translucent silicone is applied to both sides of each stationary panel, providing structural integrity and water management for many years to come.

## Standard Offering

1. Your frameless door is prefabricated and comes in standard heights and weights  
- For example, 30" x 75"
2. Standard hinges that support up to an 80 lb. door are used to attach the door to the wall.
3. Depending on where an outage is on the tiled surfaces, the glass provider may or may not fabricate the outage if it is 3/16" or less.
4. This does not provide for a super tight fit, so translucent silicone is used to fill gaps between the glass and the tiled surface.
